

PP Melt-Blown Filter Production Line

Melt Blown fabric is the most critical for production of Masks and PPE. This layer filters out the bacteria for the air we breathe and contributes significant portion of the finished product costs. With increasing demand for masks and PPE worldwide, this Melt Blown is expected to see tremendous increase in demand. Since the raw material for this project is available in most parts of the world, it is profitable project for entrepreneurs. NiveSal provides a very cost effective turn-key solution for this project.
